Did you get them to resend? Can someone light a fire under Jan on the graphs as well? Note the data on the spreadsheet needs to match the data on the graphs?

How is this. For START we are working on having Total and Dissolved combined into one column.

Got it. We have one other question on the data.

Missing analytes due alteration in SCRIBE. It looks like they added a column for non-detects so they could place the < ie <1.00 as the result. How do you want me to display as non detects <1.00 or 1 U?

You guys win, hands down. Delete the sample type (only pull field samples). Can we add sample Time after Date and Location ID at the top and find some of the missing Lat/Longs? I also want to sort the columns by locations (upstream to downstream) and date.

Looks pleasing though.

Subject: Query for Upper Animas

Marty,

Attached is an excel spreadsheet showing the crosstab information using the result_text column. It appears that ESAT is importing both the actual result and qualifier information into the result_text field so I used that to make the crosstab. I have also attached the database (rename .piz to .zip) with the query I wrote in case you need to import it into another database or need to modify the selected columns. The query name is

"Lab Results Crosstab Using Result_Text".

Feel free to give me a ring if you need any assistance. I hope this helps.
